

6. What is the logistics of taking this medication?

Ask your doctor about how you will take the medication (is it a pill, injection, infusion), about the dosing schedule, how often you need blood work or additional monitoring, and how you order your medication (for example, via a specialty pharmacy).

7. What support is available to me?

Ask your doctor about what support programs are available to you if you have any questions or concerns. If your drug is prescribed through a specialty pharmacy, you may also inquire about their specific patient services.

8. What other treatments outside of this medication should I be focused on?

Ask your doctor about what lifestyle changes can help with psoriasis, and address concerns about fatigue, mental health, and sexual health.
